Policy

1. Policy Intent & Compliance

Bowls SA is conscious of its responsibility to provide direction to its Member Clubs and Associations in relation to the conduct of the game of bowls under extreme weather conditions such as heat and humidity, rain, hail, high winds and squalls, lightning and prolonged heat.

The intent of this Policy is to enable play to continue wherever possible, empowering Event Managers to display leadership, consult and make decisions in the interests of good sportsmanship and preserving the safety and well-being of members at all times.

As such the following Bowls SA Heat & Inclement Weather Policy has been developed after research and consultation with appropriate bodies.

The Bowls SA Heat & Inclement Weather Policy is recommended for adoption by Member Clubs and Associations.

In all instances the Bureau of Meteorology 1300 214 364 Weather Service (Adelaide area) or website <https://www.bom.gov.au/sa/> for your closest weather station, is to be used to access the current or forecast temperature, rainfall, potential high winds and squalls, lightning or the Fire Danger rating for the local area.

2. Extreme Weather

a. Heat

Play must not proceed in any capacity if the:

- Ambient Temperature reaches 38 degrees Celsius
- Wet Bulb Globe Temperature reaches 32
- Apparent Temperature (Wind Chill) is less than 2 degrees Celsius (also known as the 'feels like' temperature on BOM search).

Temperatures shall be taken from the closest Bureau of Meteorology (BOM) location to the event. For your closest weather station please see Appendix A (guideline) or search the BOM website: <https://www.bom.gov.au/>

Wet Bulb Globe Temperatures and Apparent Temperatures can also be viewed for selected SA locations on the BOM website <https://www.bom.gov.au/products/IDS65004.shtml>

When the Bureau of Meteorology or Country Fire Service declare a day of Catastrophic Fire Danger (100+ reading), all bowls must be cancelled in the area affected.

b. Heat Illness Mitigation Charts

The heat illness mitigation charts sets guidelines for the Controlling Body to consider implementing as conditions move toward the thresholds for postponement.

These charts set out Ambient Temperature and Relative Humidity Levels, and Wet Bulb Globe Temperature Levels respectively. Both should be considered, with the higher risk mitigating actions being considered for implementation.

As general guidance to the relationship between ambient temperature and the risk of heat illness, please consider:

- There are not clear demarcations in risk between temperature ranges
- Stress increases with rising air temperature and relative humidity
- At low ambient temperatures, the body can cope with higher humidity than at high ambient temperatures
- Stress increases with relative humidity as it becomes more difficult to regulate body temperature due to a decrease in the evaporation of sweat (a mechanism used to keep the body cool in the heat and while exercising)
- Individual risk factors including acclimatisation to location conditions
- Bowls is played on surfaces which can increase and/or reduce the ambient temperature (e.g. synthetic grass vs natural grass). It's important the Controlling Body understands and considers these conditions when deciding on the continuation of competition. These factors include but are not limited to:
 - Where competition matches are played in fully enclosed complexes, the ambient temperature should be assessed from inside and not the outside temperatures.
 - Where competition matches are played in a semi-enclosed complex, the ambient temperature should be taken in the shade under the shade structure and not in direct sunlight.
 - Where competition matches are played on outdoor synthetic surfaces with no roof, which are known to increase in temperature caused by retention of heat in the surface of the green, it's important the Controlling Body takes this into account as temperatures can commonly increase 3-15 degrees Celsius or more. It's recommended the Controlling Body offers players additional comfort breaks to manage player fatigue when playing on these types of surfaces.

Temperature readings can be taken from 1m – 2m above the synthetic surface to give the Controlling Body an indication of what the temperature is on that surface compared to the ambient temperature. This will help identify the players comfort levels and if additional comfort breaks are needing to be offered.

- Where competition matches are played on uncovered outdoor synthetic surfaces and are known to increase in temperature, the ambient temperature should be taken on top of the synthetic surface at a height approximately 1m above ground level.

Ambient Temperature and Relative Humidity Mitigation

Ambient Temperature	Relative Humidity	Risk of Illness	Recommended Management
21^{oC} – 25^{oC}	Exceeds 70%	Low – Moderate	Play continues as scheduled.
26^{oC} – 30^{oC}	Exceeds 60%	Moderate	Play continues, caution participants and encourage hydration. Consider introducing longer breaks between games or reduce duration of play
31^{oC} – 35^{oC}	Exceeds 50%	High – Very High	Uncomfortable for most people. Caution participants and encourage hydration. Limit duration of matches, if possible. Introduce 5-minute breaks every 25 minutes or consider rescheduling matches to a cooler part of the day.
35^{oC} – 38^{oC}	Exceeds 30%	Very High – Extreme	Very stressful for most people. Caution participations and encourage hydration. Limit duration of matches, introduce 5-minute breaks every 25 minutes or consider rescheduling matches to a cooler part of the day.
38^{oC} or above	Exceeds 25%	Extreme	Postpone play until temperature drops back under 38°.

Wet Bulb Globe Temperature (WBGT)

WBGT	Risk of Illness	Recommended Management
Less than 20	Low	No action required
21 – 25	Moderate – High	Continue to monitor games and progress as scheduled. Caution participants and encourage hydration.
26 – 29	High	Consider introducing 5-minute breaks every 25 minutes. Continue to caution participants and encourage hydration.
30 – 31	Very High	Limit duration of matches, if possible. Take 5-minute breaks every 25 minutes. Continue to caution participants and encourage hydration.
32 or Greater	Extreme	Postpone or cancel play until the reading is below 32. Continue to caution participants and encourage hydration.

b. Lightning

The Controlling Body needs to actively monitor for the risk of lightning. The Controlling Body will monitor the BOM for updates on the lightning patterns and forecast in the immediate area. A key application that can be used in conjunction with BOM is “My Lightning Tracker” which can be downloaded to any smart device.

Lightning can strike without other typical storm characteristics (i.e. thunder, rain, and wind) being present.

If lightning is present, the following shall apply:

- If the time between the lightning flash and the thunder sound is less than 30 seconds, then play should be suspended and not resume until 20 minutes after the last thunder sound is heard within 30 seconds of the lightning flash (30 seconds relates to 10 kilometres away).
- The Controlling Body must instruct participants to move inside the club house or find safe and suitable shelter until the storm passes.
- If lightning continues and it's not possible to finish the uncompleted matches, the Controlling Body will cancel the days play and make a ruling on the outcome of any unfinished matches which falls in line with the relevant Conditions of Play.

c. Wet and Cold Weather

As lawn bowls is a sport that can be played all year long, we are confronted with differing weather conditions which can result in unsafe conditions of which can include downpours of rain and sometimes hail, cold weather, and high wind speeds. The Controlling Body will follow the listed guidelines to ensure the safety of all participants:

Wet Weather

Before the start of the event, the Controlling Body will monitor the expected conditions for the duration of the event through the BOM.

If it begins to rain, play will continue until the point in time surface water (puddling) starts to form on top of the greens in play, resulting in a slippery and unsafe surface. Play will only resume once all surface water has subsided within the rinks used to conduct play.

In making the decision, the Controlling Body will observe the green conditions at the venue and utilising BOM to gain an understanding of the rain patterns and forecast in the immediate area.

When the Controlling Body deems it safe to return to the green, play should resume as per Law 33.

If the rainfall and surface water continue and it's not possible to finish the uncompleted matches, the Controlling Body will cancel the days play and make a ruling on the outcome of any unfinished matches which falls in line with the relevant Conditions of Play.

Hailstorm

During competition, if hailstorm emerges, the Controlling Body shall suspend all games and advise all participants to make their way to shelter either inside the club facilities or other safe alternatives.

In making the decision to resume play, the Controlling Body will observe the green conditions at the venue and utilising BOM to gain an understanding of the hailstorm patterns and forecast in the immediate area.

When the Controlling Body deems it safe to return to the green, play should resume as per Law 33.

If the hailstorm continues and it's not possible to finish the uncompleted matches, the Controlling Body will cancel the days play and make a ruling on the outcome of any unfinished matches which falls in line with the relevant Conditions of Play.

Cold Weather (Wind Chill)

During the competition, if the wind chill factor drops below 2°C the Controlling Body will suspend play until the temperature climbs above 2°C.

In making the decision to resume play, the Controlling Body will observe the green conditions at the venue and utilising BOM to gain an understanding of the wind chill patterns and forecast in the immediate area.

When the Controlling Body deems it safe to return to the green, play should resume as per Law 33.

If the adverse temperatures continue and it's not possible to finish the uncompleted matches, the Controlling Body will cancel the days play and make a ruling on the outcome of any unfinished matches which falls in line with the relevant Conditions of Play.

Wind Speed

To enable a clear and consistent approach for the Controlling Body to deal with excessive winds during competition, there is no maximum wind speed set within this policy, however, clearly defined guidelines are provided to ensure the safety of all participants. During competition, if it becomes noticeable that the conditions are influencing the game, or the safety of participants, the Controlling Body will suspend play until the conditions improve and it's safe for participants to continue. The following interruption of play will be considered before play is suspended:

- Participants struggling to stand on the mat and deliver a bowl.
- The jack is being regularly blown off the centre line during the course of an end.
- Bowls are being blown around the rink after coming to a complete stop.
- Objects are being blown around the confines of the green causing significant danger to participants.

In making the decision to resume play, the Controlling Body will observe the green conditions at the venue and utilising BOM to gain an understanding of the wind patterns and forecast in the immediate area.

When the Controlling Body deems it safe to return to the green, play should resume as per Law 33.

If the adverse wind speeds continue and it's not possible to finish the uncompleted matches, the Controlling Body will cancel the days play and make a ruling on the outcome of any unfinished matches which falls in line with the relevant Conditions of Play.

3. Duty of Care

- a. In all circumstances Member Clubs, and Associations are urged to ensure a duty of care of participants by exercising caution and regularly monitoring the temperature and any potential inclement weather conditions before commencing, continuing or terminating Pennants, Championship Events, Open Tournaments, training and trial matches and Social and Night Bowls.
- b. If the forecast temperature is 35 degrees or more it is the responsibility of Member Clubs, and Associations to monitor, at regular intervals of no longer than 30 minutes, the temperature during all practice and play and cease play when the temperature reaches 38 degrees Celsius.
- c. Bowls SA is committed to the safety and well-being of its Members and those playing bowls throughout South Australia. The following directions have been developed with the duty of care of participants as a paramount consideration, whilst enabling all members to participate in a safe environment.

4. Member Clubs & Player's Responsibility

- a. In addition to adopting and applying a Heat & Inclement Weather Policy before commencing, continuing or terminating any Club events, Member Clubs have the responsibility to ensure that they exercise a duty of care to all players by providing adequate breaks, water for player hydration, and shade and sun protection products on all days of play.
- b. Players also have a personal responsibility to ensure that they apply sound self-management practices to minimise any likely effects of heat on their health and well-being.
- c. Cancer Council Australia recommends protecting the eyes from UV at all times when outdoors during daylight hours by wearing close-fitting wraparound sunglasses and a broad-brimmed, bucket or legionnaire style hat to protect the eyes from ultraviolet (UV) radiation.

- d. Any player who considers that the effects of prolonged heat or the forecast temperature for the day of play will have an adverse effect on their health, safety and well-being can withdraw from the competition or event without penalty.
- e. Such withdrawal may also occur during the course of play where the temperature on the green is at a level that the player considers places them at risk.

5. Pennants

- a. Associations are permitted to introduce Playing Conditions/By-Laws that reflect local content. Including
 1. How, Where and When the temperature is determined prior to and during competition.
 2. Any condition that allows for alteration of playing times to avoid cancellation of games. Providing that any such conditions do not conflict with Bowls SA policy
- b. These Conditions of Play must be lodged with and approved by Bowls SA.

6. Bowls SA Events & Training

Monitoring Conditions & Trigger Points

Bowls SA recognises that there can be a fine line when it comes to decision making regarding the cancelling / modifying of an activity because of the impact of weather. Some decisions are easy to make, others can be more challenging, and all decisions can have various levels of impact on different stakeholders. It is important to find the right balance. Some decisions can't be helped but being made at the last minute.

The following planning guide has been developed to assist Bowls SA, those planning and those participating in all Bowls SA managed events and activities, be aware of key decision trigger points.

Timing	Activities
Pre event	Where possible back up venue sought Risk management and Modification plans developed, in place, and communicated Event registration Terms and Conditions to include and highlight: • Weather Policy • Refund Policy • Modification Statement. • Participants responsibility and risk of participation
7 days out from start time	Monitoring of conditions. Pre active communication to venues and participants.
2 days out from start time	If it looks like weather could impact the running of the activity: • Communication to participants noting: - The possibility of modification and or cancellation - What options the participant has - Outline of plans of what will occur between now and the planned activity

	• Competition Manager to work with and communicate with the venue (s) and other stakeholders
24 hours prior to activity	Where weather conditions are likely to impact an activity: Communicate to participants and other stakeholders any expected impacts and modifications being implemented for the following days activity.
Morning of activity	2 hours before the start of the first activity: The temperature and conditions will be assessed by the Competition Manager and an announcement to all players and officials will be made, making them aware of any expected impacts and modifications being implemented.

Once matches have commenced the Host Playing Association temperature in place for play at any selected venue shall be applicable to events conducted at that venue.

7. Bowls Australia Events

The Bowls Australia Extreme Weather Policy is available on the Bowls Australia website www.bowlsaustralia.com.au and will apply for all Bowls Australia conducted events.

Non-Adoption or Breach of Policy

Member Clubs and Associations that breach, or choose not to adopt, the Bowls SA Heat & Inclement Weather Policy will be required to source their own adequate insurance cover.

Bowls SA recommends that all levels of Member Clubs and Associations governance record the adoption of a Heat & Inclement Weather Policy.

References, Legislation & Industrial Instruments

This policy & procedure is not intended to override any industrial instrument, contract, award, or legislation.
